SteakFest 2018 Seminar:

MEASUREMENT UNCERTAINTY

How certain are you about your measurement uncertainty?

Calibration is often defined as “an act of measurement and/or adjustment”. Legal Metrology as well as Industrial Metrology are integral to business success, but without effective and timely calibration, that success will be compromised!

Traceability and Measurement Uncertainty adds complexity to the process. Businesses that understand these concepts and their impacts are staying ahead of their competitor by a distant margin. Therefore, understanding measurement uncertainty is becoming a business investment with major emphasis on hiring and retaining well qualified metrology personnel.

Why you should attend this session:

- Understand the importance of traceability and measurement uncertainty in calibration;
- Interpret the reported uncertainty to make decisions on choosing the correct gage;
- Understand the difference between TAR and TUR;
- Become knowledgeable about the published standards as well as guidelines as it pertains to calibration and uncertainty;
- Network with fellow industry professionals;
- Bring your questions...

Come and hear our Metrology professional explain some critical aspects of measurements and why proper understanding is vital to ongoing success within your organization.
